how WINCH works

The following information
are valid for all models.

engaging

Handle and base engage
by magnetic attraction.

tightening

Tighten the lace by
turning handle.

unspooling

Detach the handle from
the base by lifting/tilting
and unspool the lace.

laces and lacing

laces

Prepare the rope so it has no open end.
When using heat cutter, avoid to create flat end.

We recommend to use a synthetic fiber lace with smooth surface.

We recommend to NOT use pure cotton lace, uncoated steel wire or too stiff laces.

tools

To speed up the rope assembly you might want to use additional tools like tweezers, hair extension needles or beading needles. These are not included.

laces and lacing

flat angles and fewer redirections of the lace lower the friction between lace and laceguide, plastic or webbing

lace too short

lace too long

too much lace

define lace length as long as necessary and as short as possible

make sure lace length matches spool capacity

application and testing

make sure lace has enough room to move freely

do not block surroundings of handle with other structures

lace will be pulled in direction of closing

make sure to chose version turning the direction which is most sufficient for your lacing design

make a pull test to verify that the connection is strong enough to fit your requirements.

make sure handle can fully engage with base by magnetic attraction

conduct performance tests on application under real conditions

lace and pull direction should be horizontal or pulling down, not pulling up

WINCH momentum/ *elegance*

female left/right

- winch momentum and elegance offer the same technology with a different handle design
- featuring a ratchet mechanism
- available in left and right turning direction

contained/ included in the following SETs
(incl. compatible male part)

- F1500-L00012(BLK)
- F1500-R00012(BLK)
- F1510-L00002(BLK)
- F1510-R00002(BLK)

- F1560-L00012(BLK)
- F1560-R00012(BLK)
- F1550-L00002(BLK)
- F1550-R00002(BLK)

WINCH momentum/ elegance

Overview

ASSEMBLY GUIDE

WINCH momentum/ elegance

rope assembly

FIDLOCK®

1

Make sure you have the desired turning direction
(L= left, R= right).

2

Prepare the rope so it has no open end.
When using heat cutter, avoid to create flat end.

3

Use one of the those ways to lace winch compact.
Consider spool capacity.
We recommend using one of the first two options.

4

Insert lace through the eyelet against direction of pull.
Tie overhand knot.

5

Trim the knots tail and melt the end. Do not melt the knot.
Pull rope tight to seat knot into recess.

6

Make sure the spool still rotates freely & is not blocked
by the knot. Make a pull test to verify that the connection
is strong enough to fit your requirements.

- reduced height and smaller diameter for low profile application
- available in left and right turning direction

contained/ included in the following SETs
(incl. compatible male part)

- F1520-L00022(BLK)
- F1520-R00022(BLK)

- F1540-L00002(BLK)
- F1540-R00002(BLK)

Winch compact

- for lace diameter 1-2.4mm depending on lace
- delivered unassembled
- laces, eyelets or laceguides not included
- magnet inside
- do not heat above 80°C

- LDRP is optional, please order separately! for lace diameter 1-1.5mm

ASSEMBLY GUIDE

WINCH compact

rope assembly

FIDLOCK®

Make sure cover and handle are the same turning direction (L= left, R= right).
Notice the two parallel holes for lacing!

Prepare the rope so it has no open end.
When using heat cutter, avoid to create flat end.
Cutting at an angle might also help.

Use one of these ways to lace winch compact.
Use LDRP for smaller lace diameters.
Notice that two laces decrease spool capacity.

Insert lace through the LDRP and the handle. Use the parallel holes only! Tie overhand knot, notice upside orientation of LDRP. Same procedure without LDRP.

Pull knot to LDRP.
Flex LDRP to break it off.

Trim the knots tail and melt the end.
Do not melt the knot.

ASSEMBLY GUIDE

WINCH compact

rope assembly

FIDLOCK®

7

For a lace loop and a second knot take the end of the lace and insert it from underneath, repeat step 5 for the knot.

8

Pull rope tight to seat knot/ LDRP into recess. Make sure the lace will not disturb the correct assembly of the cover.

9

Check the size of the knot, it should not extend over the handle's edge.

10

To assemble the cover position the two hooks on each side of the lace while tilting the cover.

11

Press in the cover and check correct position of all three hooks. They should not be bent or get damaged during assembly. Check level alignment of cover.

12

Make a pull test to verify that the knot is big / strong enough and the system's strength fits your requirements.

WINCH base

male left/right

- standard stitchable base part
- available in left and right turning direction

contained/ included in the following SETs
(incl. compatible female part)

- F1500-L00012(BLK)
- F1500-R00012(BLK)

- F1510-L00002(BLK)
- F1510-R00002(BLK)

- F1520-L00002(BLK)
- F1520-R00002(BLK)

WINCH base

Overview

base

WINCH base

- standard stitchable base part
- available in left and right turning direction
- magnet inside
- do not heat above 80°C

ASSEMBLY GUIDE

WINCH base assembly

1

Start by making a hole of 25mm diameter into the fabric.

2

Find the turning direction marking on the back of the base part. Always doublecheck before proceeding.

3

Place the base part from behind.
Do not cover geometry inside the ring!

4

Fabric material thickness should not exceed 1,3mm.
Area around base part should not be higher than the ring.

5

Stitch around the ring. We recommend to use leather needles and synthetic thread.
If it is hard to stitch soak base in water for a couple of hours before stitching.

- allows to assemble the magnetic part at the very end of the production process
- delivery as two separate parts
- assembly requires TOOL30 of our TOOLS catalogue

contained/ included in the following SETs
(incl. compatible female part)

- F1560-L00012(BLK)
- F1560-R00012(BLK)

- F1550-L00002(BLK)
- F1510-R00002(BLK)

- F1540-L00002(BLK)
- F1540-R00002(BLK)

WINCH clip-in

Overview

WINCH clip-in

- available in left and right turning direction
- sewable base part
- base part is the same for left and right turning core
- magnet inside clip-in core - do not heat above 80°C

TOOL30

TOOL30-R, TOOL30-L

- available for left and right turning direction
- TOOL30 is not included, please order separately
- use 10mm hexnut and driver or ratchet to operate the tool
- please only assemble once!
- disassembly might damage the parts

ASSEMBLY GUIDE

WINCH clip-in assembly

1

Start by making a hole of 26mm diameter into the fabric.

2

Place the base part from behind.
Do not cover geometry inside the ring!

3

Fabric material thickness should not exceed 3mm.
Area around base part should not be higher than the ring.

4

Stitch around the ring. We recommend to use leather needles and synthetic thread.
If it is hard to stitch soak base in water for a couple of hours before stitching.

5

Finish any work on your product that might damage the magnet or is easier to do without a magnet on it, e.g. heat treatment, sewing etc.

6

Check the turning direction and choose tool accordingly.

8

Use the TOOL30 with a 10mm hexnut and driver/ ratchet for easy assembly.
Turn cw for right turning core and ccw for left turning core.

7

Position the core in the base part.
The base part is the same for left and right turning cores. Check turning direction.
The next step is not reversible without damaging the parts!

9

Check the connection and function.
